

Weekly Task Report 4

Name	Abu Sufian Robin		
Week 4 Task Report			
Focus Area	Task Goals Complete	Completed Task Details	Corresponding Code Files
Database Integration	☒ Work with SQL CRUD Operations ☒ Integrate MySQL Connect with python ☒ Database Handling	In these two projects, I have done some database operations using MySQL connection with Python, such as creating a student (email, age, id) for student table, delete student, update student data, and used PyQt library to show student table data in user interface. I have mainly done database handling and UI with Python library and sql integration in the project.	MySQL_Python_Project_1, MySQL_Python_Project_2
		In these files I have implemented a project by integrating some python and sql with the initial setup. Where I have created a project for a multiple ui page using the database of the previous project. And I have created a separate file for the sql code, where I have created the tables of that database.	Multi_page_app, UIU_Mariner.sql, example.py, test_gui.py

Project Details

MySQL_Python_Project_1 Details

In this project's `db_connect()` method, I have provided a database connection where I have ensured a connection to my database by providing the necessary variables and performing print operations. In this file *Data_Table.sql* I have written my database and its tables. And in this file *gui_main.py* I have created an interface using PyQt where I have shown the data through tables. And in this file *crud.py* I have written the queries and Python codes for CRUD operations of the database. Where I have used various permissions of the database tables.

MySQL_Python_Project_2_Details

For this project I have created a Python virtual environment. And in this file *main.py* I have written all the queries and methods for database operations. And the database connection has also been made in this file. For that we have ensured that the database is connected by blocking try-exception. And in this *command.txt* text file the commands on how to run this project are given and the output is also given in text form.
